

Build a Premium Gen-Z Portfolio Website

You are a senior full-stack developer, UI/UX designer, motion designer, and creative director responsible for building a world-class personal portfolio website from scratch.

The final website should feel like a blend of Apple-level polish, Awwwards-winning creativity, and modern startup aesthetics. The portfolio must be highly interactive, visually impressive, responsive, and memorable.

The target audience includes recruiters, founders, hiring managers, clients, and fellow developers.

Tech Stack (Mandatory)

Use the following technologies throughout the project:

- Next.js (Latest App Router)
- React.js
- TypeScript
- Three.js
- Framer Motion (for advanced animations)
- GSAP (for premium scroll interactions)
- Tailwind CSS
- Shadcn UI
- React Three Fiber
- Drei
- Lenis Smooth Scrolling
- Vercel-ready deployment setup

Code must follow production-level standards with reusable components, proper folder structure, clean architecture, and maintainability.

Design Vision

The portfolio should not look like a traditional resume website.

Create a futuristic digital experience with:

- Immersive 3D visuals
- Smooth page transitions
- Interactive mouse effects
- Glassmorphism
- Neumorphism accents
- Dynamic gradients
- Animated backgrounds
- Floating elements

- Scroll-triggered storytelling
- Modern typography
- Premium micro-interactions

The overall feeling should be:

"Young, ambitious, innovative, creative, and technically elite."

Think:

- Linear
 - Stripe
 - Vercel
 - Apple
 - Framer
 - Arc Browser
 - Awwwards Portfolio Winners
-

Color Theme

Create a vibrant Gen-Z color palette.

Primary Colors:

- Electric Purple
- Neon Blue
- Cyan
- Deep Space Black

Accent Colors:

- Pink
- Violet
- Electric Green

Background:

- Dark futuristic gradient

Example:

Background:

050816

0B1026

121826

Accents:

8B5CF6

06B6D4

22D3EE

EC4899

Avoid boring corporate colors.

User Experience Goals

The website must feel alive.

Implement:

- Smooth scrolling
- Cursor interactions
- Hover animations
- 3D camera movements
- Section reveal animations
- Magnetic buttons
- Scroll-based transitions
- Loading screen animation
- Interactive background effects

Every interaction should provide visual feedback.

Website Structure

Create the following sections.

1. Hero / Landing Section

Purpose: Immediately impress visitors.

Features:

- Full-screen experience
- Animated 3D background
- Interactive Three.js scene
- Floating particles
- Dynamic lighting
- Name reveal animation
- Role typing effect

Display:

Hello, I'm Adarsh Kumar

Software Engineer AI Engineer System Designer Educator

CTA Buttons:

- View Projects
- Download Resume
- Contact Me

Add:

- Animated social icons
 - Scroll indicator
 - Dynamic gradient lighting
-

2. About Section

Purpose: Tell a story instead of listing facts.

Include:

- Personal introduction
- Career journey
- Professional goals
- Areas of expertise

Use:

- Animated timeline
- 3D card interactions
- Hover effects

Show expertise cards:

- Python
- AI/ML
- Full Stack Development
- System Design
- Cloud
- Data Engineering

Cards should tilt on mouse movement.

3. Experience Section

Create a premium vertical timeline.

Display:

- Company
- Position
- Duration
- Key achievements

Features:

- Scroll-triggered animations
- Progress line animation
- Glassmorphism cards
- Expandable details

Add company logos with subtle animations.

4. Projects Section

This should be the strongest section.

Create a visually rich project showcase.

Each project card should contain:

- Project image
- Description
- Tech stack
- Live demo
- GitHub link
- Features

Interactions:

- 3D hover effects
- Parallax motion
- Expand-on-click animation

Create featured projects area.

Display projects in:

- Bento Grid Layout
- Masonry Layout

Include filtering by:

- AI
 - Web Development
 - Data Engineering
 - System Design
-

5. Education Section

Present education as a journey.

Include:

- Degree
- Institution
- Timeline
- Achievements

Add:

- Interactive roadmap design
- Animated milestone points
- Floating icons

Keep the design modern and minimal.

6. Skills Section

Create a separate premium skills showcase.

Categories:

- Programming Languages
- Frameworks
- Databases

- Cloud Technologies
- AI Tools
- DevOps

Display skills through:

- Animated skill spheres
- Interactive orbit system
- Dynamic progress visualization

Use Three.js where appropriate.

7. Contact Section

Purpose: Convert visitors into opportunities.

Include:

- Contact form
- Email
- LinkedIn
- GitHub
- Twitter/X

Features:

- Animated form fields
- Success animations
- Smooth validation
- Social media hover effects

Add a final CTA:

"Let's Build Something Extraordinary Together."

3D Experience Requirements

Implement Three.js experiences throughout the website.

Examples:

Hero:

- Floating geometric object
- Particle universe
- Interactive orb

Projects:

- 3D project showcase

Skills:

- Rotating skill globe

Background:

- Dynamic particles
- Animated stars
- Floating gradients

Performance must remain smooth.

Target: 60 FPS

Animation Guidelines

Use:

- Framer Motion
- GSAP

Animations should be:

- Smooth
- Elegant
- Purposeful

Avoid excessive movement.

Implement:

- Fade-ins
 - Slide reveals
 - Scale effects
 - Parallax scrolling
 - Text stagger animations
 - Morphing transitions
-

Mobile Responsiveness

Website must work flawlessly on:

- Mobile
- Tablet

- Laptop
- Desktop
- Ultrawide monitors

Ensure:

- Responsive layouts
 - Touch-friendly interactions
 - Optimized animations
-

Performance Optimization

Follow best practices:

- Lazy loading
- Code splitting
- Dynamic imports
- Image optimization
- SEO optimization

Target:

- Lighthouse Score 90+
 - Fast loading speed
 - Smooth interaction performance
-

SEO Requirements

Implement:

- Metadata
- Open Graph Tags
- Structured Data
- Sitemap
- Robots.txt

Optimize for discoverability.

Folder Structure

Create a scalable architecture:

/app /components /sections /hooks /lib /utils /public /styles /types

Use reusable components everywhere.

Final Deliverable

The final result should feel like a premium digital experience that immediately communicates:

- Technical excellence
- Creativity
- Professionalism
- Innovation
- Strong personal brand

The website should be impressive enough to stand out among thousands of developer portfolios and leave visitors with a memorable first impression.
